Testing Steps:

Pre-condition:
1. Create a repo named "test-repo".
2. Create multiple branches (atleast 5)
3. Create a PAT(token) for the organization and give "Content" permissions.
4. Create a Pull Request from branch-1 towards the main branch.
5. Check-in some junk file in branch-2.
6. Configure Owner, Repo Name, PAT, Branch Idle Days, and PR Reminder Days (Give 1 for testing purpose).

Ref:

Active branches

Branch	Updated	Check status	Behind	Ahead	Pull request		
features/branch-2	now		0	1		🗑	⋯
features/branch-1	yesterday		0	1	↱ #1	🗑	⋯
features/branch-5	yesterday		0	0		🗑	⋯
features/branch-4	yesterday		0	0		🗑	⋯
features/branch-3	yesterday		0	0		🗑	⋯

Test Run:
1. Run "GitPruner" Service

Output:
1. Deleted Idle Branches

```
🗑 Deleted branch features/branch-3, idle for 1 days
🗑 Deleted branch features/branch-4, idle for 1 days
🗑 Deleted branch features/branch-5, idle for 1 days
```

Active branches

Branch	Updated	Check status	Behind	Ahead	Pull request		
features/branch-2	3 hours ago		0	1		🗑	⋯
features/branch-1	yesterday		0	1	↱ #1	🗑	⋯

2. Commented on Idle PR
